Produce Traceability Initiative Grade Codes for Use With Data Synchronization

The following is a list of codes managed by PMA which can be used to identify the grade of produce. This information should be used to populate the Grade Code (gradeCode) attribute. While the attribute is free form text, use of this list will help to ensure continuity of data across the supply chain.

It is recommended that this list is utilized when customizing the PTI-provided Data Synchronization Template, EDI messages, and the Global Data Synchronization Network (GDSN).

Source: PMA; current as of January 2012.
